

New Maybridge building blocks

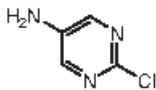

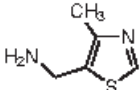

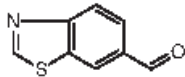

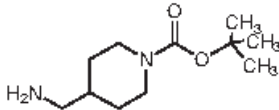

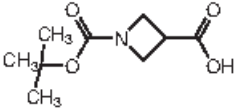

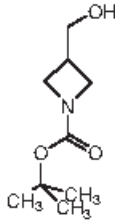

Issue 1 - 2014

The availability of diverse and pharmacophorically relevant synthetic building blocks remains a critical success factor in the drug design process. Where key building blocks are not commercially available, in-house synthesis consumes vital time and can add considerable cost to the project.

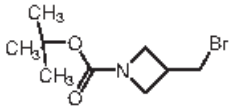

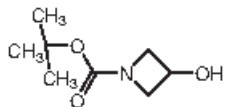

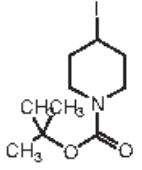

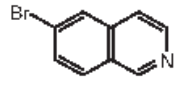

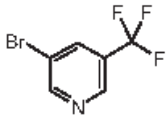

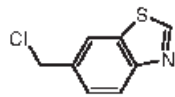

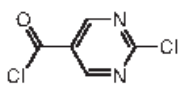

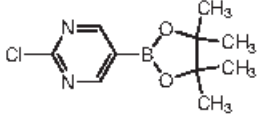

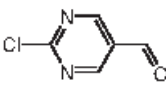

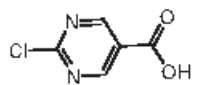

Over the last 50 years, we have built an unparalleled, off-the-shelf collection of building blocks with medically important ring systems, many of which are unique to the Maybridge™ brand. Our primary focus is on heterocyclic chemistry because we believe that such pharmacophore-enhancing molecules are key tools for the drug discovery chemist.

We are regularly introducing new products into our portfolio. Discover a selection of the latest compounds now available in the Maybridge building blocks range.

Quality, availability and cost effectiveness

- All our building blocks are analyzed in-house using one or more of the following techniques: NMR, HPLC, GC and/or IR
- With more than 95% stock availability, our product offering provides a speedy and reliable source for high-quality building blocks
- Our building blocks are now even more competitively priced, offering excellent value for money

Discover our structure search tool at www.maybridge.com to find specific building blocks and check their stock availability.
